Contents

<i>Preface</i>	v
1. Introduction	1
1.1 Non-relativistic three-nucleon and three-quark systems . .	1
1.1.1 Description of three-nucleon systems	2
1.1.2 Three-quark systems	3
1.2 Dispersion relation technique for three particle systems . .	4
1.2.1 Elements of the dispersion relation technique for two-particle systems	5
1.2.2 Interconnection of three particle decay amplitudes and two-particle scattering ones in hadron physics	6
1.2.3 Quark-gluon language for processes in regions I, III and IV	10
1.2.4 Spectral integral equation for three particles . . .	11
1.2.5 Isobar models	12
1.2.6 Quark-diquark model for baryons and group- theory approach	19
2. Elements of Dispersion Relation Technique for Two-Body Scattering Reactions	25
2.1 Analytical properties of four-point amplitudes	25
2.1.1 Mandelstam planes for four-point amplitudes . . .	26
2.1.2 Bethe-Salpeter equations in the momentum repre- sentation	29
2.2 Dispersion relation N/D -method and ansatz of separable interactions	34

2.2.1	N/D -method for the one-channel scattering amplitude of spinless particles	34
2.2.2	Scattering amplitude and energy non-conservation in the spectral integral representation	37
2.2.3	Composite system wave function and its form factors	39
2.2.4	Scattering amplitude with multivertex representation of separable interaction	42
2.3	Instantaneous interaction and spectral integral equation for two-body systems	45
2.3.1	Instantaneous interaction	45
2.3.2	Spectral integral equation for a composite system	47
2.4	Appendix A. Angular momentum operators	52
2.4.1	Projection operators and denominators of the boson propagators	55
2.4.2	Useful relations for $Z_{\mu_1 \dots \mu_n}^\alpha$ and $X_{\nu_2 \dots \nu_n}^{(n-1)}$	56
2.5	Appendix B: The $\pi\pi$ scattering amplitude near the two-pion thresholds, $\pi^+\pi^-$ and $\pi^0\pi^0$	58
2.6	Appendix C: Four-pole fit of the $\pi\pi(00^{++})$ wave in the region $M_{\pi\pi} < 900$ MeV	59
3.	Spectral Integral Equation for the Decay of a Spinless Particle	63
3.1	Three-body system in terms of separable interactions: analytic continuation of the four-point scattering amplitude to the decay region	64
3.1.1	Final state two-particle S -wave interactions	65
3.1.2	General case: rescatterings of outgoing particles, $P_i P_j \rightarrow P_i P_j$, with arbitrary angular momenta	71
3.2	Non-relativistic approach and transition of two-particle spectral integral to the three-particle one	77
3.2.1	Non-relativistic approach	78
3.2.2	Threshold limit constraint	80
3.2.3	Transition of the two-particle spectral integral representation amplitude to the three-particle spectral integral	81
3.3	Consideration of amplitudes in terms of a three-particle spectral integral	84
3.3.1	Kinematics of the outgoing particles in the c.m. system	86

3.3.2	Calculation of the block $B_{13-12}^{(0)}(s, s_{12})$	86
3.4	Three-particle composite systems, their wave functions and form factors	87
3.4.1	Vertex and wave function	88
3.4.2	Three particle composite system form factor	89
3.5	Equation for an amplitude in the case of instantaneous interactions in the final state	90
3.6	Conclusion	91
3.7	Appendix A. Example: loop diagram with $G^L = G^R = 1$	92
3.8	Appendix B. Phase space for n -particle state	92
3.9	Appendix C. Feynman diagram technique and evolution of systems in the positive time-direction	93
3.9.1	The Feynman diagram technique and non-relativistic three particle systems	94
3.10	Appendix D. Coordinate representation for non-relativistic three-particle wave function	97
4.	Non-relativistic Three-Body Amplitude	101
4.1	Introduction	101
4.1.1	Kinematics	101
4.1.2	Basic principles for selecting the diagrams	103
4.2	Non-resonance interaction of the produced particles	106
4.2.1	The structure of the amplitude with a total angular momentum $J = 0$	106
4.2.2	Production of three particles in a state with $J = 1$	120
4.3	The production of three particles near the threshold when two particles interact strongly	123
4.3.1	The production of three spinless particles	124
4.4	Decay amplitude for $K \rightarrow 3\pi$ and pion interaction	126
4.4.1	The dispersion relation for the decay amplitude	126
4.4.2	Pion spectra and decay ratios in $K \rightarrow \pi\pi\pi$ within taking into account mass differences of kaons and pions	130
4.4.3	Transformation of the dispersion relation for the $K \rightarrow \pi\pi\pi$ amplitude to a single integral equation	134
4.5	Equation for the three-nucleon amplitude	137
4.5.1	Method of extraction of the leading singularities	138
4.5.2	Helium-3/tritium wave function	145

4.6	Appendix A. Landau rules for finding the singularities of the diagram	150
4.7	Appendix B. Anomalous thresholds and final state interaction	153
4.8	Appendix C. Homogeneous Skorniyakov–Ter-Martirosyan equation	158
4.9	Appendix D. Coordinates and observables in the three-body problem	159
4.9.1	Choice of coordinates and group theory properties	159
4.9.2	Parametrization of a complex sphere	162
4.9.3	The Laplace operator	163
4.9.4	Calculation of the generators L_{ik} and B_{ik}	165
4.9.5	The cubic operator Ω	168
4.9.6	Solution of the eigenvalue problem	170
5.	Propagators of Spin Particles and Relativistic Spectral Integral Equations	173
5.1	Boson propagators	174
5.1.1	Projection operators and denominators of the boson propagators	174
5.2	Propagators of fermions	176
5.2.1	The classification of the baryon states	176
5.2.2	Spin-1/2 wave functions	177
5.2.3	Spin-3/2 wave functions	179
5.3	Spectral integral equations for the coupled three-meson decay channels in $\bar{p}p$ ($J^{PC} = 0^{-+}$) annihilation at rest . . .	182
5.3.1	The S - P - D -wave meson rescatterings	183
5.3.2	Equations with inclusion of resonance production	188
5.3.3	The coupled decay channels $\bar{p}p(J^{PC} = 10^{-+}) \rightarrow \pi^0\pi^0\pi^0, \eta\eta\pi^0, \bar{K}K\pi^0$	189
5.4	Conclusion	194
6.	Isobar model and partial wave analysis. D -matrix method	197
6.1	The K -Matrix and D -Matrix Techniques	198
6.1.1	K -matrix approach	198
6.1.2	Spectral integral equation for the K -matrix amplitude	200
6.1.3	D -matrix approach	201

6.2	Meson-meson scattering	204
6.2.1	K -matrix fit	204
6.2.2	D -matrix fit	207
6.3	Partial wave analysis of baryon spectra in the frameworks of K -matrix and D -matrix methods	209
6.3.1	Pion and photo induced reactions	212
7.	Reggeon-Exchange Technique	217
7.1	Introduction	217
7.2	Meson-nucleon collisions at high energies: peripheral two- meson production in terms of reggeon exchanges	219
7.2.1	K -matrix and D -matrix approaches	220
7.2.2	Reggeized pion-exchange trajectories for the waves $J^{PC} = 0^{++}, 1^{--}, 2^{++}, 3^{--}, 4^{++}$	223
7.2.3	Amplitudes with a_J -trajectory exchanges	227
7.2.4	$\pi^- p \rightarrow K \bar{K} n$ reaction with exchange by ρ -meson trajectories	233
7.3	Results of the fit	237
7.3.1	The $f_0(1300)$ state	239
7.4	Summary for isoscalar resonances	243
7.4.1	Isoscalar-scalar sector	243
7.4.2	Isoscalar-tensor sector	244
7.4.3	Isoscalar sector $J^{PC} = 4^{++}$	244
7.5	Appendix A. D -matrix technique in the two-meson produc- tion reactions	245
7.5.1	D -matrix in one-channel and two-channel cases	245
7.6	Appendix B. Elements of the reggeon exchange technique in the two-meson production reactions	247
7.6.1	Angular momentum operators for two-meson systems.	248
7.6.2	Reggeized pion exchanges	249
7.7	Appendix C. Cross sections for the reactions $\pi N \rightarrow \pi\pi N$, KKN , $\eta\eta N$	256
7.7.1	The CERN-Munich approach	257
7.7.2	GAMS, VES, and BNL approaches	258
7.8	Appendix D. Status of trajectories on (J, M^2) plane	259
7.8.1	Kaon trajectories on (J, M^2) plane	261
7.9	Appendix E. Assignment of Mesons to Nonets	262

8.	Searching for the Quark–Diquark Systematics of Baryons	267
8.1	Diquarks and reduction of baryon states	267
8.2	Baryons as quark–diquark systems	271
8.2.1	S -wave diquarks and baryons	271
8.2.2	Wave functions of quark–diquark systems with $L = 0$	272
8.2.3	Wave functions of quark–diquark systems with $L \neq 0$	277
8.2.4	Quarks and diquarks in baryons	279
8.3	The setting of states with $L = 0$ and the $SU(6)$ symmetry	282
8.3.1	Baryon spectra for the excited states	283
8.3.2	The setting of ($L=0$) states	284
8.4	The setting of baryons with $L > 0$ as (qD_1^1, qD_0^0) states .	285
8.4.1	The setting of $N(J^+)$ states at $M_{D_0^0} \neq M_{D_1^1}$ and $L \geq 2$	288
8.4.2	The setting of the $N(J^-)$ states at $M_{D_0^0} \neq M_{D_1^1}$.	289
8.4.3	The setting of $\Delta(J^+)$ states at $M_{D_0^0} \neq M_{D_1^1}$ and $L \geq 2$	290
8.4.4	The setting of $\Delta(J^-)$ states at $M_{D_0^0} \neq M_{D_1^1}$. . .	291
8.4.5	Overlapping of baryon resonances	292
8.5	Version with $M_{D_0^0} = M_{D_1^1}$ and overlapping $qD_0^0(S = 1/2)$ and $qD_1^1(S = 1/2)$ states	296
8.6	Conclusion	297
8.7	Appendix A. Spectral integral equations for pure qD_0^0 and qD_1^1 systems	299
8.7.1	Confinement singularities	299
8.7.2	The qD_0^0 systems	300
8.7.3	Spectral integral equations for qD_1^1 systems with $I = 3/2$	303
8.8	Appendix B. Group theoretical description. Symmetrical basis in the three-body problem	307
8.8.1	Group theoretical properties. Parametrization . .	309
8.8.2	Basis functions	311
8.8.3	Transformation coefficients $\langle j'_1 j'_2 j_1 j_2 \rangle_{KJM}^\varphi$	313
8.8.4	Applying $\langle j'_1 j'_2 j_1 j_2 \rangle_{KLM}^\Phi$ to the three-body problem	318
8.8.5	The d -function of the $O(6)$ group	319
9.	Conclusion	323
