Contents

1. Toward Intelligent Materials	1
<i>W. Seth Childers, Anil K. Mehta, Thinh Q. Bui, Yan Liang, and David G. Lynn</i>	
1.1 Introduction	1
1.2 Forming Ordered Networks	3
1.3 Engineering Dynamic Diversity	5
1.4 Forces Mediating Crystallization	10
1.5 Expanding Structural Diversity	16
1.6 Transitioning to Intelligent Materials	25
2. E and Z Secondary Amides in Supramolecular Nanotubes and Nanospheres	37
<i>Yves L. Dory</i>	
2.1 Introduction	37
2.2 Hydrogen Bonds	38
2.3 Concepts	39
2.4 Supramolecular Tubes	40
2.5 Supramolecular Spheres	50
2.6 Applications	54
2.7 Conclusion	56
3. Control of Chiral Assemblies Through Hydrogen Bondings for Helical Architectures	67
<i>Toshiyuki Moriuchi and Toshikazu Hirao</i>	
3.1 Introduction	67
3.2 Chiral Assemblies of Ferrocene–Peptide Bioconjugates	68
3.2.1 Chiral Assemblies of 1,1'-Disubstituted Ferrocene–Peptide Bioconjugates	68
3.2.2 Chiral Assemblies of Monosubstituted Ferrocene–Peptide Bioconjugates	73
3.2.3 Complexation-Induced Chiral Assemblies of Ferrocene–Peptide Bioconjugates	76

3.3	Chiral Assemblies of 2,6-Pyridinedicarboxamides and Dipeptidyl Urea	79
3.3.1	Chiral Assemblies of 2,6-Pyridinedicarboxamides	79
3.3.2	Chiral Assemblies of Dipeptidyl Urea	82
3.4	Conclusion	84
4.	The Self-Assembly of Lipophilic Guanosine Derivatives	93
	<i>Stefano Masiero, Silvia Pieraccini, and Gian Piero Spada</i>	
4.1	Introduction	93
4.2	Self-Assembly in the Presence of Metal Ions	97
4.3	Self-Assembly in the Absence of Metal Ions	103
4.4	From LG's Supramolecular Complexes to LG-Based Functional Materials	107
5.	Self-Assemblies, Folding, and Properties of Perylene Monomers, Oligomers, and Polymers	123
	<i>Alexander D. Q. Li</i>	
5.1	Introduction	123
5.2	Self-Assemblies of Large Planar Molecules	125
5.3	Folding of Perylene Oligomers: Tunable Nanosolenoids	130
5.3.1	To Fold or to Assemble?	130
5.3.2	Foldable Polymer Synthesis	134
5.3.3	NMR Studies of Folding and Self-Assembling Phenomena	141
5.3.4	Photoluminescence Properties of Folded Polymers	143
5.4	Folding of Hybrid DNA–Perylene Polymers: Gene Sensors	145
5.4.1	Thermophilic Foldamers	145
5.4.2	Hybrid Foldamers as Genes Probes	150
5.4.3	Mechanically Stretching to Induce Unfolding of π -Stacked Structures	154
5.5	Specific Molecular Assemblies: Molecular Codes	157
5.5.1	Self-Assembly Direct Specific Reactions	157
5.5.2	Characterizing Macrocyclic Rings and Concatenated Rings	160
5.5.3	Definition of Molecular Codes	164

5.5.4	Molecular Codes Control Reactions	169
5.6	Chiral Molecular Codes	172
5.6.1	Chiral Molecular Codes Direct Specific Cyclolization	173
5.6.2	The Cyclic Homo- and Heterodimer Equilibrium	177
5.7	Single-Molecule Studies of Chromophoric Foldamers	182
5.7.1	Ensemble Absorption and Emission Spectra of Foldamers	182
5.7.2	Single-Molecule Studies of Linear Foldamers	186
5.7.3	Single-Molecule Studies of Macrocyclic and Concatenated Foldamers	189
5.7.4	Single-Molecule Time Trace Analysis	192
5.7.5	The Emission of π -Stacks	194
5.8	Concluding Remarks	197
6.	Supra-Amphiphiles for Controlled Self-Assembly and Disassembly	207
	<i>Chao Wang and Xi Zhang</i>	
6.1	What Is Supra-Amphiphile?	207
6.2	Driving Forces for the Formation of Supra-Amphiphile	209
6.3	The Architectural Engineering of Supra-Amphiphiles	211
6.4	Responsive Supra-Amphiphiles	213
6.4.1	Responsive One-Dimensional Nanostructure	214
6.4.2	Responsive Carriers	216
6.4.3	Responsive Surface	218
6.5	Outlook	219
7.	Molecular Self-Assemblies in Co-Crystals: Engineering Chemical Reactivity and Organic Semiconductor Materials	223
	<i>Tomislav Friščić, Dushyant B. Varshney, Elizabeth Elacqua, Joseph C. Sumrak, Anatoliy N. Sokolov, and Leonard R. MacGillivray</i>	
7.1	Introduction	223

7.2	Finite Molecular Assemblies and Co-Crystals	224
7.3	Challenges to Control Reactivity and Mobility	226
7.4	Templated Solid-State Reactivity	228
7.4.1	Complex Targets	230
7.5	Stacking of Organic Semiconductors via Finite Assemblies in Co-Crystals	233
7.6	Summary and Outlook	234
8.	Well-Defined Porphyrin Architectures From Self-Assembly and Dewetting	239
	<i>Johannes A. A. W. Elemans, Roeland J. M. Nolte, and Alan E. Rowan</i>	
8.1	Introduction	239
8.2	Ring- and Line-Shaped Porphyrin Architectures	240
8.2.1	The First Rings: Porphyrin Dimers	240
8.2.2	Extended Circular Porphyrin Oligomers	242
8.2.3	From Rings to Lines	248
8.2.4	Application of the Linear Assemblies	254
8.3	Conclusion and Outlook	255
9.	Pt/Pd-Ethynyl Bond Containing Fluorescent Molecular Architectures as Sensors for Nitroaromatics	259
	<i>Partha Sarathi Mukherjee, Sunipa Pramanik, and Sankarasekaran Shanmugaraju</i>	
9.1	Introduction	259
9.2	2D Molecular Architectures Containing Ethynyl Moiety: Molecular Rectangles	261
9.2.1	Synthesis and Characterization of the Organometallic Pt ^{II} ₂ (1)/Pd ^{II} ₂ (2) Molecular "Clips"	262
9.2.2	Self-Assembly of Cationic Molecular Rectangles	265
9.2.2.1	Synthesis and Characterization of the Cationic Rectangles	265
9.2.2.2	UV-Visible Absorption Studies	266
9.2.2.3	Cation Sensing	267
9.2.3	Self-Assembly of Neutral Molecular Rectangles	269

9.2.3.1	Synthesis and Characterization of Neutral Molecular Rectangles	270
9.3	3D Molecular Architectures Containing Ethyne Functionalities: Molecular Prisms	271
9.3.1	Self-Assembly of Trigonal Prisms	272
9.3.2	Molecular Prisms From 4,4',4''-Tris [[Ethyne]- <i>Trans</i> -Pt(PEt ₃) ₂ (NO ₃)] Triphenylamine Acceptor	273
9.3.2.1	Synthesis of the Pt ₃ Acceptor 14	273
9.3.2.2	Syntheses and Characterization of the Supramolecular Prisms 17 and 18	275
9.3.3	Molecular Prisms From 4,4',4''-Tris [Ethyne]- <i>Trans</i> -Pt(PEt ₃) ₂ (NO ₃)] Triphenylethane	277
9.3.3.1	Synthesis of the Pt ₃ Acceptor	277
9.3.3.2	Synthesis and Characterization of Molecular Prism From Pt ^{II} ₃ Acceptor 19	279
9.3.4	Complementary Approach: Molecular Prisms Using Trigonal Donors	280
9.3.5	Absorption and Fluorescence Properties of the Molecular Prisms	280
9.4	Nitroaromatics Detection via Fluorescence Quenching	283
9.4.1	Nitroaromatic Sensing by the Macrocyclic Rectangle 12	284
9.4.2	Nitroaromatic Sensing by the Supramolecular Prisms	285
9.4.3	TNT Vapor Quenches the Fluorescence of Compound 21 in Solid State	287
9.5	Experimental Procedures	288
9.5.1	Synthesis of the Organometallic Acceptor "Clip" 1	288
9.5.2	Synthesis of 1,8-Bis[<i>Trans</i> -(Ethyne)] Pd(PEt ₃) ₂ (NO ₃)]Anthracene	289
9.5.3	General Synthetic Procedure for 8–11	290
9.5.3.1	Synthesis of the Rectangle 8	290
9.5.3.2	Synthesis of the Rectangle 9	290

9.5.3.3	Synthesis of the Rectangle 10	291
9.5.3.4	Synthesis of the Rectangle 11	291
9.5.3.5	Synthesis of the Macrocyclic 13	291
9.5.3.6	Synthesis of 4,4',4''-Tris[Ethynyl- <i>Trans</i> -Pt(PEt ₃) ₂ (NO ₃)] Triphenylamine	292
9.5.3.7	1,1,1-Tris[4-(<i>Trans</i> -Pt(PEt ₃) ₂ l) Ethynylphenyl]Ethane	293
9.5.3.8	1,1,1-Tris[4-{ <i>Trans</i> -Pt(PEt ₃) ₂ (NO ₃)}Ethynylphenyl]Ethane	293
9.5.3.9	Synthesis of the Prism 17	293
9.5.3.10	Synthesis of the Prism 18	294
9.5.3.11	Synthesis of the Prism 21	294
9.5.3.12	Synthesis of the Prism 23	295
10.	Photophysics and Photochemistry of Molecular Recognition and Sensing with Metal-Directed Macrocyclic Systems	301
	<i>Arvind Kumar and Shih-Sheng Sun</i>	
10.1	Introduction	302
10.2	Photophysical and Photochemical Properties of Metal-Directed Macrocyclic Complexes Incorporating Diimine Rhenium Tricarbonyl Moieties	304
10.3	Optical Sensing of Guest Molecules by Chromogenic and/or Luminescent Rhenium- Based Metallacyclic Supramolecules	314
10.4	Photophysics and Photochemistry of Metallacyclic Supramolecules and Molecular Recognition	316
10.5	Chiral Recognition and Sensing by Metallacyclic Supramolecules	325
10.6	Porphyrin-Based Metallacyclic Supramolecules for Molecular Recognition and Sensing	329
10.7	Electrochemical Sensing by Metallacyclic Supramolecules	333
10.8	Metallacyclic Supramolecular Thin Films for Chemical Sensing	337
10.9	Molecular Recognition From Three- Dimensional Metallacyclic Cages	339

10.10	Concluding Remarks	343
11.	Pd^{II} and Pt^{II} Metal-Directed Self-Assembly of Supramolecular Structures Based on N-Monoalkyl-4,4'-Bipyridinium Derivatives	351
	<i>Carlos Peinador, Victor Blanco, Marcos D. García, and José M. Quintela</i>	
11.1	Introduction	352
11.2	Self-Assembly Strategies	352
11.3	Self-Assembly of Pd ^{II} and Pt ^{II} Metallocycles	354
11.3.1	Dynamic Formation of Self-Organized Corner-Connected Square Metallocycles by Stoichiometric Control	356
11.4	Inclusion Complexes	358
11.4.1	Inclusion Complexes with 1:1 Stoichiometry	358
11.4.2	Inclusion Complexes with 1:2 Stoichiometry	362
11.4.3	Stereoselective Self-Assembly of Metallomacrocycles Induced by an Aromatic Guest	364
11.5	Catenanes	366
11.5.1	[2]Catenanes	367
11.5.2	[3]Catenanes Based on <i>Cis</i> Palladium Complexes	368
11.5.2.1	The Catenation Process Can Be Switched Off and On	372
11.5.3	[3]Catenanes Based on <i>Trans</i> Palladium Complexes	373
11.5.4	Regioselective Catenation	374
11.6	Molecular Knots	377
11.7	Conclusions and Outlook	378
12.	Functional Microstructures by Self-Assembly	383
	<i>Nicole K. Thomas, Huanfen Yao, Ilkka Lähdesmäki, and Babak A. Parviz</i>	
12.1	Introduction	383
12.2	Nanoscale Self-Assembly	385
12.2.1	Material-Specific Binding of Genetically Engineered Peptides	386

12.2.2	Two-Dimensional Self-Assembly of 1-Pyrylphosphonic Acid	390
12.2.3	Self-Assembled Quantum Dot Subdiffraction Waveguides	395
12.3	Microscale Self-Assembly	401
12.3.1	Microscale 2D Self-Assembly on Template Guided by Gravity and Fluid Flow	401
12.3.2	Microscale 2D Self-Assembly on Template Involving Low Melting Point Alloys	402
12.3.3	Microscale 3D Self-Assembly	407
12.4	Conclusions	408
13.	Colloidal Superparticles From Artificial Atoms	411
	<i>Jared Lynch, Jiaqi Zhuang, Tie Wang, Derek LaMontagne, and Y. Charles Cao</i>	
13.1	Theoretical Considerations on the Formation of Colloidal Superparticles	413
13.1.1	Interactions Between Nanocrystals in Colloidal Solutions	415
13.2	Superparticle Nucleation Rate	419
13.3	Superparticles with a Short-Range Order	420
13.3.1	Hydrogen Bonding	421
13.3.2	Molecular Mediator-Induced Assembly	422
13.3.3	Dipole-Dipole Interactions	425
13.4	Supercrystalline Superparticles	428
13.4.1	Microemulsion-Template Synthesis	428
13.4.2	Controlled Induction of Solvophobic Interactions	429
13.4.3	Nonspherical Supercrystalline Superparticles	436
13.5	Concluding Remarks	441
	<i>Index</i>	447
