PART I Exploring Fundamentals	1
1. Good Clinical Practice Principles: Legal Background and Applicability	3
<i>Umberto Filibeck, Angela Del Vecchio, and Fabrizio Galliccia</i>	
Summary	3
1.1. Introduction	4
1.2. Good Clinical Practice	4
1.2.1. ICH E6: Guidelines for Good Clinical Practice	4
1.2.2. WHO Guidelines for Good Clinical Practice for Trials on Pharmaceutical Products	7
1.2.3. WHO Handbook for Good Clinical Research Practice Guidance for Implementation	7
1.2.4. WHO Good Clinical Laboratory Practice	7
1.3. Good Clinical Practice: Legal Background in the European Union	8
1.4. Good Clinical Practice: Applicability in the European Union	10
1.4.1. EU 2007 Conference on the Implementation and Applicability in the European Union of Legislation on Clinical Trials of Medical Products	10
1.4.2. Directives 2001/20/EC, 2005/28/EC, and Good Clinical Practice in Case of Noncommercial Clinical Trials	11
1.5. Good Clinical Practice and Bioequivalence Trials: GCP Inspections and Laboratories	13
1.5.1. General Aspects	13
1.5.2. EMA Guidelines on Bioequivalence Studies	14
1.5.3. EMA Reflection Paper for Applicants Who Want to Submit Bioequivalence Performed Outside the European Union	15

1.5.4. Good Clinical Practice Bioequivalence Inspections	16
1.5.5. Good Clinical Practice Clinical Laboratory Inspections	19
1.5.6. Good Clinical Practice Inspections on Phase I Units	20
1.6. Good Clinical Practice for Clinical Trials with Advanced Therapy Medicinal Product	20
1.7. Good Clinical Practice and Clinical Trials in Developing Countries	22
1.7.1. The Increase of Clinical Trials in Developing Countries	22
1.7.2. European Union Legislation and Clinical Trials in Developing Countries	23
References	25
2. Clinical Chemistry and the Quest for Quality	29
<i>Sergio Caroli</i>	
Summary	29
2.1. Introduction	30
2.2. Quality Today	31
2.2.1. General Aspects	31
2.2.2. Major Quality Systems and Their Scope	32
2.3. Conclusions	55
References	55
3. Uncertainty in Clinical Chemistry Measurements Including Preanalytical Variables	59
<i>Marit Sverresdotter Sylte, Tore Wentzel-Larsen, and Bjørn J. Bolann</i>	
Summary	59
3.1. Introduction	60
3.2. Analytical Uncertainty in Laboratory Results	62
3.2.1. General Aspects	62
3.2.2. Control Materials	62
3.2.3. Estimating Analytical Precision	64
3.2.4. Within-Run Precision (Repeatability)	65
3.2.5. Total Analytical Precision (Reproducibility)	66
3.2.6. Estimating Precision Using Duplicates	66
3.3. Trueness and Traceability	67
3.3.1. Basic Concepts	67

3.3.2. Reference Methods and Materials	69
3.3.3. Estimating the Trueness	70
3.3.4. Factorizing the Patients' Results	70
3.3.5. Changing Reagent Lot	71
3.3.6. Analytical Specificity	72
3.3.7. Method Validation	73
3.4. Proficiency Testing	74
3.4.1. Background Information	74
3.4.2. Choice of EQA Schemes	75
3.4.3. Interpretation and Actions	76
3.5. Biological Variations and Quality Goals	77
3.6. Reference Intervals	80
3.6.1. Establishing Reference Intervals	80
3.6.2. Transferring Reference Intervals	83
3.7. Estimating Preanalytical Uncertainty	83
3.7.1. Setting the Stage	83
3.7.2. Preanalytical Variables	86
3.7.3. The Model for an Uncertainty Budget	88
3.7.4. Statistical Analysis	89
3.7.5. Assumptions and Modeling Details	90
3.8. Conclusions	92
References	93
4. The Role and Significance of Reference Values in the Identification and Evaluation of Trace Elements from Diet	97
<i>Pietro Apostoli and Maria Cristina Ricossa</i>	
Summary	97
4.1. Reference Values	97
4.2. Reference Values in Specific Groups of Population: The Children Case	100
4.3. Trace Elements and Diet	106
4.4. Arsenic	108
4.5. Mercury	110
4.6. Lead	112
4.7. Chromium	114

4.8. Cadmium	115
4.9. Conclusions	116
References	117
5. Sample Collection, Storage, and Pretreatment in Clinical Chemistry	127
<i>Andrew Taylor</i>	
Summary	127
5.1. Introduction	128
5.2. Collection Procedures	129
5.2.1. Sample Types	129
5.2.2. Practical Issues	130
5.3. Storage	132
5.4. Pretreatment	133
5.5. Conclusions	136
References	137
6. Metal Toxicology in Clinical, Forensic, and Chemical Pathology	139
<i>José A. Centeno, Todor I. Todorov, Gijsbert B. van der Voet, and Florabel G. Mullick</i>	
Summary	139
6.1. Introduction	140
6.2. Biological Markers	140
6.3. Methodology for Trace Metal Ion Analysis in Clinical, Forensic, and Chemical Pathology	141
6.3.1. Clinical Chemistry Implications	141
6.3.2. Forensic Toxicology Implications	143
6.3.3. Chemical Pathology Implications	143
6.4. Case Studies of Relevance to Research and Diagnosis on Clinical Chemistry, Forensic Toxicology, and Chemical Pathology	144
6.4.1. Case Study No. 1: Copper Levels in Placental Tissues as a Biomarker for Menkes Disease	144
6.4.2. Case Study No. 2: Cd, Fe, Se, and Zn in Prostate Tissue as Biomarkers for Prostate Disease	145
6.4.3. Case Study No. 3: Measurement of Dental Implant Corrosion Products and Histological Correlation in Periimplant Tissues	146

6.4.4. Case Study No. 4: Skin Pigmentation after Exposure to Topical Hg from Skin Ointment	148
6.4.5. Case Study No. 5: Analysis of U Isotope Ratios by using ICP-MS for the Assessment of Natural U or DU Exposures	149
Disclaimer	152
References	152
PART II Selected Applications	157
7. Elemental Speciation in Clinical Sciences	159
<i>Douglas M. Templeton</i>	
Summary	159
7.1. Introduction	159
7.1.1. General Aspects	159
7.1.2. Definitions	160
7.1.3. Levels of Speciation	161
7.2. Selected Elements	167
7.2.1. Background Concepts	167
7.2.2. Biological Speciation of Essential Elements	167
7.2.3. Biological Speciation of Toxic Elements	170
7.3. Conclusions	172
References	173
8. The Role of Analytical Chemistry in the Safety of Drug Therapy	179
<i>Sándor Görög</i>	
Summary	179
8.1. Drug Quality and Analysis: Their Role in Drug Safety	180
8.1.1. Introductory Remarks	180
8.1.2. The Role of Pharmacopoeias in Assuring Drug Quality	181
8.2. Methodological Aspects	189
8.2.1. Historical Overview	189
8.2.2. Spectroscopic Techniques	190
8.2.3. Chromatography and Related Techniques	192
8.2.4. Hyphenated Techniques	195
8.2.5. Miscellaneous Methods	198
8.3. The Role of Analytical Chemistry in Drug Research, Development, and Production	200

8.3.1. QC of Drugs	200
8.3.2. Drug Impurity Profiling	202
8.3.3. Drug Stability Issues	214
8.3.4. Contribution of Analytical Chemistry to Drug Research	215
8.3.5. Chiral Issues	223
8.4. Future Trends	227
References	227
9. Analytical Techniques and Quality Control of Pharmaceuticals	245
<i>Fedele Manna, Francesca Rossi, and Rossella Fioravanti</i>	
Summary	245
9.1. Introduction	245
9.2. Sources of Impurities in Medicines	246
9.3. Validation of Analytical Methods	247
9.3.1. Specificity	248
9.3.2. Linearity	248
9.3.3. Precision	248
9.3.4. Trueness	249
9.3.5. Accuracy	249
9.3.6. Dosing Range	249
9.3.7. Quantification Limit	250
9.4. Analytical Approaches	250
9.4.1. General	250
9.4.2. TLC	251
9.4.3. HPLC	251
9.4.4. CE	253
9.5. Conclusions	253
References	253
10. Detection of Drugs in Biological Fluids for Antidoping Control	257
<i>Sabina Strano Rossi and Marcello Chiarotti</i>	
Summary	257
10.1. Introduction	257
10.2. Doping Control and Analytical Requirements	258

10.3. Confirmation Techniques	262
10.4. Conclusions	264
References	264
11. The Applicability of Plasma-Based Techniques to Biological Monitoring	269
<i>Ilse Steffan and Goran Vujic</i>	
Summary	269
11.1. Introduction	269
11.2. ICP as a Spectrochemical Source	271
11.3. Element Analysis in Environmental and Biological Materials	276
11.3.1. General	276
11.3.2. Method Development	277
11.3.3. Reference Materials	278
11.3.4. Environmental Applications	279
11.3.5. Studies on Human Subjects	281
11.3.6. Studies on Animals	287
11.3.7. Studies on Drugs	291
11.3.8. Studies on Food	291
11.4. Conclusions	292
References	293
12. Atomic Spectrometric Techniques for the Analysis of Clinical Samples	319
<i>Pilar Bermejo Barrera, Antonio Moreda Piñeiro, and María del Carmen Barciela Alonso</i>	
Summary	319
12.1. Introduction	320
12.2. Analytical Techniques	320
12.2.1. Atomic Absorption Spectrometry	320
12.2.2. Atomic Emission Spectrometry	336
12.2.3. Atomic Fluorescence Spectrometry	341
12.2.4. Inductively Coupled Plasma Mass Spectrometry	342
12.2.5. State of the Art	345
12.3. Sample Preparation	347

12.3.1. Precautions During Sampling and Contamination Control	347
12.3.2. Storage of Samples	348
12.3.3. Methods for Sample Preparation	348
12.3.4. Direct Analysis of Solid Samples	350
12.4. Speciation Analysis	351
12.5. Quality Control in Trace Element Determination	355
12.6. Conclusions	358
References	359
13. Applications of ICP-MS in Human Biomonitoring Studies	367
<i>Peter Heitland and Helmut D. Köster</i>	
Summary	367
13.1. Introduction	367
13.2. Advantages and Limitations of Inductively Coupled Plasma Mass Spectrometry	368
13.3. Sample Collection and Storage	370
13.4. Sample Preparation	371
13.5. Human Biomonitoring by Inductively Coupled Plasma Mass Spectrometry	374
13.5.1. General	374
13.5.2. Potentially Toxic Elements: Cadmium, Mercury, Lead	374
13.5.3. Essential Trace Elements: Copper, Selenium, Zinc	375
13.5.4. Nonmetals: Bromine and Iodine	376
13.5.5. Precious Metals: Silver, Gold, Iridium, Palladium, and Platinum	377
13.5.6. Actinides: Uranium and Thorium	378
13.5.7. Multielemental Determinations	378
13.6. Trace Element Speciation and Metallomics	382
13.7. Determination of Stable Isotopes	384
13.8. Method Validation and Quality Assurance	384
13.9. Conclusions	387
References	387

14. Molybdenum in Biological Samples and Clinical Significance of Serum Molybdenum	397
<i>Munehiro Yoshida</i>	
Summary	397
14.1. Introduction	397
14.2. Analysis of Molybdenum in Biological Samples by Inductively Coupled Plasma Mass Spectrometry	398
14.2.1. General	398
14.2.2. Sample Preparation	398
14.2.3. Determinations by Inductively Coupled Plasma Mass Spectrometry	399
14.3. Molybdenum in Food	400
14.3.1. Molybdenum Concentration in Food	400
14.3.2. Speciation of Molybdenum in Food	400
14.3.3. Molybdenum Intake in Human Population	401
14.4. Molybdenum in Human Samples	401
14.4.1. Molybdenum in Urine	401
14.4.2. Molybdenum in Blood	403
14.4.3. Molybdenum in Milk	403
14.5. Clinical Significance of Serum and Plasma Mo	404
14.5.1. Index of Dietary Molybdenum Intake	404
14.5.2. Index of Molybdenum Exposure	405
14.5.3. Index of Various Diseases	405
14.6. Conclusions	406
References	406
15. Application of Organometallic Speciation in Clinical Studies	409
<i>Bin He, Chungang Yuan, Jing Sun, and Guibin Jiang</i>	
Summary	409
15.1. Introduction	409
15.2. Arsenic	410
15.2.1. Arsenic Pollution and Arsenicosis	410
15.2.2. Arsenic Biotransformation and Metabolism	410
15.2.3. Clinical Application of Arsenicals	411
15.2.4. Analytical Techniques and Clinical Applications	412

15.2.5. Arsenic Speciation	414
15.2.6. Application of Arsenic Speciation Techniques in Clinical Analysis	416
15.3. Mercury	422
15.3.1. Introduction	422
15.3.2. Sample Pretreatment	423
15.3.3. Gas Chromatography and its Hyphenated Methods	426
15.3.4. High-Performance Liquid Chromatography and its Hyphenated Methods	430
15.4. Tin	432
15.4.1. Introduction	432
15.4.2. Analytical Techniques and Clinical Applications	434
15.4.3. Developments in Analytical Techniques	435
15.4.4. Significance of Speciation Analysis of Organo-Tin Compounds in Clinical Applications	439
15.5. Conclusions	441
References	441
16. Biosensors for Drug Analysis	455
<i>Daniela Deriu and Franco Mazzei</i>	
Summary	455
16.1. Introduction	455
16.2. Basic Concepts	456
16.3. Electrochemical Biosensors	460
16.3.1. First-Generation Biosensors	460
16.3.2. Second-Generation Biosensors	460
16.3.3. Third-Generation Biosensors	461
16.4. Surface Plasmon Resonance	462
16.5. Biosensors for Drugs Analysis	465
16.5.1. Biosensors for Catecholamines Detection	465
16.5.2. Polyphenol Oxidase/Tyrosinase-Based Biosensors	469
16.5.3. Biosensors for Hormones Analysis	469
16.6. Conclusions	471
References	471

17. Bioimaging of Metals and Proteomic Studies of Clinical Samples by Laser Ablation Inductively Coupled Plasma Mass Spectrometry (LA-ICP-MS)	479
<i>J. Sabine Becker and J. Susanne Becker</i>	
Summary	479
17.1. Introduction	480
17.2. Analytical Approaches	481
17.3. Experimental Aspects of Imaging Laser Ablation Inductively Coupled Plasma Mass Spectrometry	485
17.3.1. General	485
17.3.2. Bioimaging of Metals and Quantification Strategies	486
17.3.3. Single Hair Strand Analysis by Line Scan Measurement	488
17.3.4. Bioimaging of Metals in Biological Tissues by Laser Ablation Inductively Coupled Plasma Mass Spectrometry	489
17.4. Conclusions	498
Acknowledgment	499
References	499
18. Applications of LC-MS/MS in Clinical Laboratory Diagnostics	507
<i>Uta Ceglarek, Georg Martin Fiedler, and Joachim Thiery</i>	
Summary	507
18.1. Introduction	507
18.1.1. Methods in Laboratory Medicine	507
18.1.2. Tandem Mass Spectrometry in the Clinical Laboratory	508
18.1.3. Pre-Analytical Aspects of Clinical Laboratory Testing	509
18.1.4. Sample Preparation of Human Body Fluids for Liquid Chromatography-Mass Spectrometry Analysis	510
18.2. Current Applications and Future Perspectives	513
18.2.1. Mass Spectrometry Concepts	513
18.2.2. MS Instrumentation	515
18.2.3. Coupling of Liquid Chromatography with Mass Spectrometry	518

18.2.4. Development of Liquid Chromatography-Tandem Mass Spectrometry Methods for Clinical Laboratory Diagnostics	519
18.3. Liquid Chromatography-Tandem Mass Spectrometry Applications in Clinical Laboratories	520
18.3.1. Determination of Amino Acids and Acylcarnitines for Inherited Metabolic Diseases	520
18.3.2. Therapeutic Drug Monitoring of Immunosuppressives	523
18.3.3. Sterol Lipids	524
18.3.4. Steroid Hormones	525
18.3.5. Eicosanoid Profiling with Quadrupole-Trap Mass Spectrometry	526
18.4. Conclusions	528
References	528
19. Metabolomics Using UPLC/HPLC-Tandem Mass Spectrometry in Diagnosis and Research of Inherited Metabolic Diseases	535
<i>Willem Kulik and André B. P. van Kuilenburg</i>	
Summary	535
19.1. Introduction	536
19.2. Acylcarnitines	537
19.2.1. General	537
19.2.2. Carnitine Biosynthesis	538
19.3. Acyl-Coenzyme A Thioesters	538
19.4. Amino Acids	540
19.5. Organic Acids	542
19.6. Purines and Pyrimidines	542
19.7. Bile Acids	544
19.8. Lipidomics	545
19.8.1. General	545
19.8.2. Very Long Chain Fatty Acids, Pristanic Acid, Phytanic Acid	545
19.8.3. Sterols	547
19.8.4. Isoprenoid Biosynthesis	547
19.8.5. Phospholipids	547
19.9. Carbohydrates	548

19.10. Neurotransmitters	548
19.11. Conclusions	549
Further Reading	549
References	549
20. Biomarkers of Oxidative Stress in Plasma and Urine	555
<i>Papasani V. Subbaiah</i>	
Summary	555
20.1. Introduction	556
20.2. Antioxidant Mechanisms and Assays	558
20.2.1. Total Antioxidant Capacity of Plasma	558
20.2.2. Measurement of Ratios of Reduced/Oxidized Antioxidants (Plasma)	561
20.2.3. Markers of Protein Oxidation	562
20.2.4. Markers of DNA Oxidation (Blood and Urine)	564
20.2.5. Markers of Lipid Oxidation	566
20.2.6. Primary Oxidation Products	568
20.2.7. Degradation Products of Lipid Oxidation	569
20.2.8. Acrolein (Urine)	576
20.2.9. Oxidized Low Density Lipoprotein Assays (Plasma)	576
20.2.10. <i>Ex Vivo</i> Oxidizability of Low-Density Lipoproteins (Plasma)	578
20.2.11. Enzyme Markers (Plasma)	579
20.3. Concluding Remarks and Perspectives	583
References	584
21. The Use of X-Ray Techniques in Medical Research	595
<i>Imre Szalóki, Gyula Záray, and Norbert Szoboszlai</i>	
Summary	595
21.1. Introduction	595
21.2. Physical Basis of XRF Analytical Methods	596
21.3. Basic Equipment and Setup for X-Ray Fluorescence Analysis	597
21.3.1. X-Ray Sources	597
21.3.2. X-Ray Optics	600
21.3.3. Mirrors and Multilayers	603
21.3.4. Detectors	603

21.3.5. Setup for Total Reflection X-Ray Fluorescence and X-Ray Fluorescence Microanalysis	605
21.4. Quantification Approaches	606
21.5. Sample Preparation Techniques	609
21.6. Applications	610
21.6.1. General	610
21.6.2. Blood	611
21.6.3. Urine	613
21.6.4. Cerebrospinal Fluid	613
21.6.5. Amniotic Fluid	614
21.6.6. Tissues	614
21.6.7. Cells–Cell Lines	615
21.7. Conclusions	617
References	617
PART III Future Trends	625
22. A New Tool Based on the Use of Stable Isotopes and Isotope Pattern Deconvolution (IPD)-ICP-MS for Nutritional and Clinical Studies	627
<i>Héctor González Iglesias, Maria Luisa Fernández-Sánchez, and Alfredo Sanz-Medel</i>	
Summary	627
22.1. Introduction	627
22.2. Milk as Source of Trace Elements	628
22.3. Stable Isotopes and Trace Elements Metabolism	629
22.4. Isotope Pattern Deconvolution	631
22.5. Selenium Metabolism in Lactating Rats by Means of Stable Isotopes and Isotope Pattern Deconvolution	631
22.6. Determination of Selenium in Urine, Faeces, Serum, and Erythrocytes by Isotope Pattern Deconvolution Inductively Coupled Plasma Mass Spectrometry	634
22.6.1. Determination of Endogenous and Exogenous Total Selenium in Urine and Feces	634
22.6.2. Determination of Endogenous and Exogenous Total Selenium in Serum and Red Blood Cells	636
22.7. Quantitative Speciation of Selenium in Urine, Serum, and Erythrocytes by High Performance Isotope Pattern Deconvolution Inductively Coupled Plasma Mass Spectrometry	637

22.7.1. General	637
22.7.2. High-Performance Isotope Pattern Deconvolution Inductively Coupled Plasma Mass Spectrometry Quantification of Natural and Exogenous Selenospecies in Urine	637
22.7.3. Quantification of Endogenous (Natural) and Exogenous Selenospecies in Erythrocytes	640
22.7.4. Quantification of Natural and Exogenous Selenospecies in Serum	642
22.8. An Application of Isotope Pattern Deconvolution to Clinical Studies	643
22.9. Conclusions	645
References	646
23. Breath Analysis: Analytical Methodologies and Clinical Applications	651
<i>Alessio Ceccarini, Fabio Di Francesco, Roger Fuoco, Silvia Ghimenti, Massimo Onor, Sara Tabucchi, and Maria Giovanna Trivella</i>	
Summary	651
23.1. Introduction	652
23.2. Sampling Methods	655
23.3. Analytical Techniques	658
23.3.1. General	658
23.3.2. Gas Chromatography Mass Spectrometry	658
23.3.3. Selected Ion Flow Tube Mass Spectrometry	660
23.3.4. Proton Transfer Reaction Mass Spectrometry	660
23.3.5. Ion Mobility Spectrometry	662
23.3.6. Laser Spectroscopy	662
23.3.7. Sensor-Based Systems	663
23.4. Application of Breath Analysis	664
23.4.1. General	664
23.4.2. Tests Approved by the US Food and Drug Administration	665
23.4.3. Diagnostic Challenges	669
23.4.4. Breath Markers and Pathological Conditions	671
23.5. Exposure Assessment	675
23.6. Exhaled Breath Condensate	677

23.7. Conclusions	677
References	678
24. Proteo-Metabolomic Strategies in the Future of Drug Development	691
<i>Uwe Christians, Volker Schmitz, Jost Klawitter, and Jelena Klawitter</i>	
Summary	691
24.1. Introduction	692
24.2. The Principles of Molecular Marker Development	699
24.2.1. General Aspects	699
24.2.2. Discovery	699
24.2.3. Qualification	701
24.2.4. Validation	707
24.2.5. Regulatory Aspects	710
24.3. Technologies for Molecular Marker Development	718
24.3.1. Nontargeted Discovery Technologies	718
24.3.2. General Strategies	719
24.3.3. Targeted Strategies	734
24.4. Molecular Markers in Drug Development and Clinical Monitoring	737
24.4.1. Introductory Comments	737
24.4.2. Kidney Dysfunction Markers	743
24.5. Current Challenges	749
