CONTENTS

Preface	xxi
Foreword to the First Edition	xxv
Mathematical Symbols	xxvii
Abbreviations	xxxiii
1 Introduction: Subject and Methods	1
1.1 Objectives, 1	
Molecular Engineering and Intuitive Guesswork, 1	
Main Objectives of This Book in Comparison with Other Sources, 4	
1.2 Definitions of Chemical Bonding and Transition Metal Coordination System, 7	
Chemical Bonding as an Electronic Phenomenon, 7	
Definition of Coordination System, 9	
1.3 The Schrödinger Equation, 12	
Formulation, 12	
Role of Approximations, 14	
Summary Notes, 15	
References, 16	

2	Atomic States	18
2.1	One-Electron States, 18	
	Angular and Radial Functions, 18	
	Orbital Overlaps: Hybridized Functions, 24	
	Spin–Orbital Interaction, 27	
	Relativistic Atomic Functions, 30	
2.2	Multielectron States: Energy Terms, 35	
	Electronic Configurations and Terms, 35	
	Multielectron Wavefunctions, 40	
	Slater–Condon and Racah Parameters, 42	
	The Hartree–Fock Method, 46	
	Summary Notes, 51	
	Questions, 51	
	Exercises and Problems, 52	
	References, 52	
3	Symmetry Ideas and Group-Theoretical Description	54
3.1	Symmetry Transformations and Matrices, 54	
3.2	Groups of Symmetry Transformations, 60	
	<i>Example 3.1.</i> The Symmetry Group of an Octahedral O_h System and Its Classes, 62	
3.3	Representations of Groups and Matrices of Representations, 64	
3.4	Classification of Molecular Terms and Vibrations, Selection Rules, and Wigner–Eckart Theorem, 69	
	<i>Example 3.2.</i> Energy Terms of Electronic Configuration e^2 , 71	
3.5	Construction of Symmetrized Molecular Orbitals and Normal Vibrations, 74	
	<i>Example 3.3.</i> Construction of E_g -Symmetry-Adapted σ MOs for Octahedral O_h Systems, 76	
	<i>Example 3.4.</i> Construction of T_{2g} -Symmetry-Adapted π MOs for Octahedral O_h Systems, 79	
	<i>Example 3.5.</i> Normal Coordinates of a Regular Triangular Molecule X_3 , 80	
3.6	The Notion of Double Groups, 81	
	Summary Notes, 82	

Exercises, 82	
References, 83	
4 Crystal Field Theory	84
4.1 Introduction, 84	
Brief History, 84	
Main Assumptions, 85	
4.2 Splitting of the Energy Levels of One d Electron in Ligand Fields, 86	
Qualitative Aspects and Visual Interpretation, 86	
Calculation of the Splitting Magnitude, 92	
<i>Example 4.1.</i> Splitting of a d -Electron Term in Octahedral Crystal Fields, 94	
Group-Theoretical Analysis, 97	
4.3 Several d Electrons, 99	
Case of a Weak Field, 99	
Strong Crystal Fields and Low- and High-Spin Complexes, 105	
<i>Example 4.2.</i> High- and Low-Spin Octahedral Complexes of Iron, 110	
Energy Terms of Strong-Field Configurations, 110	
Arbitrary Ligand Fields and Tanabe–Sugano Diagrams, 112	
4.4 f -Electron Term Splitting, 115	
4.5 Crystal Field Parameters and Extrastabilization Energy, 121	
4.6 Limits of Applicability of Crystal Field Theory, 126	
Summary Notes, 128	
Questions, 129	
Exercises and Problems, 129	
References, 130	
5 Method of Molecular Orbitals and Related Approaches	132
5.1 Basic Ideas of the MO LCAO Method, 133	
Main Assumptions, 133	
Secular Equation, 134	
Classification by Symmetry, 135	

- Symmetrized Orbitals, 138
Simplification of the Secular Equation, 141
- 5.2 Charge Distribution and Bonding in the MO LCAO Method and the Case of Weak Covalency, 142**
Atomic Charges and Bond Orders, 142
Example 5.1. Shortcomings of Mulliken's Definition of Atomic Charges in Molecules, 145
Bonding, Nonbonding, and Antibonding Orbitals, 147
Case of Weak Covalency, 149
Angular Overlap Model, 151
- 5.3 Methods of Calculation of MO Energies and LCAO Coefficients, 154**
SCF MO LCAO Approximation, 154
The Role of Basis Sets, 157
Electron Correlation Effects, 161
Example 5.2. Exercise: Ab Initio Calculation of CuF_2 Using Hartree-Fock and MP2 Methods, 166
- 5.4 Semiquantitative Approaches, 168**
Pseudopotentials or Effective Core Potentials (ECPs), 170
Density-Functional Approaches, 171
Example 5.3. Exercise: Calculation of ZnCl_2 by the DFT Method, 178
Example 5.4. Exercise: Ab Initio Calculation of the Electronic Structure of MnO_4^- Square-Planar, Tetrahedral, and Square-Based Pyramidal Configuration, 180
Relativistic Approaches, 184
- 5.5 Semiempirical Methods, 187**
Zero-Differential Overlap (ZDO), 188
Extended Hückel (Hoffmann) Method, 192
Iterative Extended Hückel Method, 193
Example 5.5. A_{1g} -Type MOs of Octahedral TiF_6^{3-} Calculated Using the Extended Hückel (Wolfsberg-Helmholz) Approximation, 196
Quasirelativistic Parameterization, 198
Example 5.6. Quasirelativistic Evaluation of Energies of Ionization of Several Valence States (EIVS) of s , p , and d Electrons of the Pt Atom, 201

5.6 Fragmentary Calculations, Molecular Mechanics, and Combined Quantum/Classical (QM/MM) Modeling, 201

Fragmentary Calculations, 202

Molecular Mechanics, 206

Example 5.7. Application of Molecular Modeling to Transition Metal Complexes with Macrocycles, 208

Combined Quantum/Classical (QM/MM) Methods, 211

Example 5.8. Oxidative Addition of H_2 to $Pt(t-Bu)_3)_2$ Treated by ONIOM Version of QM/MM Methods, 215*Example 5.9.* Iron Picket-Fence Porphyrin Treated by the QM/MM Method with Charge Transfer (QM/MM/CT), 221**5.7 General Comparison of Methods, 224**

Summary Notes, 229

Exercises and Problems, 230

References, 231

6 Electronic Structure and Chemical Bonding 238**6.1 Classification of Chemical Bonds by Electronic Structure and Role of d and f Electrons in Coordination Bonding, 238**

Criticism of the Genealogical Classification, 239

Classification by Electronic Structure and Properties, 241

Features of Coordination Bonds, 243

Coordination Bonding by Pre- and Posttransition Elements, 245

6.2 Qualitative Aspects and Electronic Configurations, 246

Most Probable MO Schemes, 246

Electronic Configurations in Low- and High-Spin Complexes, 247

Covalence Electrons and Ionization Potentials, 251

6.3 Ligand Bonding, 254

General Considerations: Multiorbital Bonds, 254

Monoorbital Bonds: Coordination of NH_3 and H_2O , 259*Example 6.1.* Ab Initio Numerical SCF-CI Calculations of the Electronic Structure of Monoorbital Bonds: $Ni(H_2O)_n$ and $Ni(PH_3)_n$, $n = 1, 2$, 261Diorbital Bonds: Coordination of the N_2 Molecule, 261*Example 6.2.* Electronic Structure and Bonding in FeN_2 , 264
Coordination of Carbon Monoxide, 264

- Example 6.3.* Bonding and Charge Transfer in the Pt—CO Complex, 265
- Example 6.4.* Bonding in M—CO with M = Cr, Fe, Co, Ni, 267
- Example 6.5.* Bonding in Sc—CO, Ni—CO, and Ni(CO)₂, 268
- $\sigma + \pi$ Bonding, 269
- Example 6.6.* Electronic Structure of Transition Metal Hexacarbonils M(CO)₆, 271
- CO Bonding on Surfaces, 273
- Bonding of NO, 275
- Example 6.7.* Coordination of NO on the Ni(111) Surface, 276
- Coordination of C₂H₄, 277
- Example 6.8.* Ethylene Bonding to Transition Metal Centers, 278
- Example 6.9.* Ethylene Bonding in PtCl₃(C₂H₄)⁻ and PdCl₃(C₂H₄)⁻, 279
- Metal–Metal Bonds and Bridging Ligands, 282
- Example 6.10.* Multiple Metal–Metal Bonds in [Re₂Cl₈]²⁻ and [Mo₂Cl₈]⁴⁻, 284
- 6.4 Energies, Geometries, and Charge Distributions, 291**
- Ionization Energies, 291
- Example 6.11.* Ab Initio Calculations of Ni(C₃H₅)₂, 293
- Total and Bonding Energies, Geometries, and Other Properties, 295
- 6.5 Relativistic Effects, 303**
- Orbital Contraction and Valence Activity, 304
- Example 6.12.* Relativistic Effects in Catalytic Activity of Pt and Pd Complexes, 306
- Bond Lengths, Bond Energies, and Vibrational Frequencies, 307
- Example 6.13.* Relativistic Effects in Metal Hydrides, 307
- Correlation Between Spin–Orbital Splitting and Bonding, 310
- Example 6.14.* Relativistic Semiempirical Calculation of PtCl₆²⁻, 312
- Other Relativistic Effects, 315
- Summary Notes, 315**

	Exercises and Problems, 316	
	References, 318	
7	Electronic Control of Molecular Shapes and Transformations via Vibronic Coupling	324
7.1	Molecular Vibrations, 325	
	Adiabatic Approximation, 325	
	Normal Coordinates and Harmonic Vibrations, 328	
	Special Features of Vibrations of Coordination Systems, 336	
7.2	Vibronic Coupling, 337	
	Vibronic Constants, 337	
	Orbital Vibronic Constants, 339	
	<i>Example 7.1.</i> Vibronic MO Description of Electronic Structure of N ₂ and CO, 342	
7.3	The Jahn–Teller Effect, 344	
	The Jahn–Teller Theorem, 344	
	The Jahn–Teller Effect in a Twofold-Degenerate Electronic State, 351	
	Threefold-Degenerate Electronic States, 364	
7.4	Pseudo-Jahn–Teller Effect and the Two-Level Paradigm, 369	
	Pseudo-Jahn–Teller (PJT) Instability, 369	
	Uniqueness of the Vibronic Mechanism of Configuration Instability: The Two-Level Paradigm, 377	
	<i>Example 7.2.</i> Numerical Confirmation of PJT Origin of Instability of High-Symmetry Configurations, 379	
	<i>Example 7.3.</i> Numerical Calculations Confirming the PJT Origin of Configuration Instability of Coordination Systems, 380	
	Further Insight into the Pseudo-JTE and Hidden JTE, 381	
	<i>Example 7.4.</i> Comparison of Covalence versus Polarization Contributions to PJT Instability, 384	
	<i>Example 7.5.</i> Why Some ML ₂ Molecules (M = Ca, Sr, Ba; L = H, F, Cl, Br) are Bent While Others Are Linear, 385	
	<i>Example 7.6.</i> Hidden JTE in CuF ₃ : Ab Initio Calculations, 387	
	Summary Notes, 388	
	Exercises and Problems, 389	
	References, 390	

8 Electronic Structure Investigated by Physical Methods

392

8.1 Band Shapes of Electronic Spectra, 393

Qualitative Interpretation of Vibrational Broadening, 393

Example 8.1. Broad and Narrow Bands in Light Absorption and Emission by Transition Metal Complexes, 396

Theory of Absorption Band Shapes, 396

Band Shapes of Electronic Transitions between Nondegenerate States; Zero-Phonon Lines, 399

Types of Electronic Transitions on Intensity, 402

Example 8.2. Selection Rules for Polarized Light Absorption by the PtCl_4^{2-} Complex, 403

8.2 *d-d*, Charge Transfer, Infrared, and Raman Spectra, 405

Origin and Special Features of *d-d* Transitions, 406

Example 8.3. *d-d* Transitions in the Absorption Spectrum of $\text{Mn}(\text{H}_2\text{O})_6^{2+}$, 407

Example 8.4. Temperature-Dependent Absorption Spectra of K_2NaCrF_6 and Emerald, 410

Spectrochemical and Nephelauxetic Series, 411

Charge Transfer Spectra, 415

Example 8.5. Some Ligand \rightarrow Metal or Metal \rightarrow Ligand Charge Transfer Spectra, 416

Infrared Absorption and Raman Scattering, 417

Example 8.6. Resonance Raman Spectrum of Red $\text{K}_2[\text{Ni}(\text{dto})_2]$ in Solid State, 421

Transitions Involving Orbitally Degenerate States, 422

8.3 X-Ray and Ultraviolet Photoelectron Spectra; EXAFS, 426

General Ideas, 426

Example 8.7. Photoelectron Spectra of Specific Coordination Systems and Their Interpretation, 429

Electron Relaxation; Shakeup and CI Satellites, 431

Example 8.8. Configuration Interaction Satellite to the $\text{K}^+ 3s$ Emission Line in the UPS Spectrum of KF, 434

Chemical Shift, 436

Example 8.9. The $1s$ Line of Nitrogen in the XPS of Different Coordination Systems Reflecting the Variety of Its Bonding in Different Groups, 439

EXAFS and Related Methods, 440

Example 8.10. Applications of EXAFS Spectroscopy to a Variety of Problems, 442

8.4 Magnetic Properties, 443

Magnetic Moment and Quenching of Orbital Contribution, 443

Paramagnetic Susceptibility, 447

Electron Spin Resonance (ESR), 449

Magnetic Exchange Coupling, 457

Example 8.11. Magnetic Exchange Coupling in Binuclear Copper Acetate Hydrate, 461

Example 8.12. The Nature of Metal–Metal Bonding in Binuclear Copper Acetate Hydrate, 462

Spin Crossover, 465

Magnetic Circular Dichroism (MCD), 468

8.5 Gamma-Resonance Spectroscopy, 472

The Mossbauer Effect, 472

γ -Resonance Spectra, 473

Isomer Shift and Quadrupole Splitting in GRS, 474

Hyperfine Splitting, 478

Example 8.13. Magnetic Hyperfine Structure in GRS of Coordination Compounds with a ^{57}Fe Nucleus, 479

Example 8.14. Observation of Spin Crossover in the γ -Resonance Spectrum of $[\text{Fe}(\text{phen})_2(\text{NCS})_2]$, 482

8.6 Electron Charge and Spin Density Distribution in Diffraction Methods, 483

The Method of Deformation Density, 483

Example 8.15. Deformation Density in Sodium Nitroprusside (Direct Inspection), 485

Example 8.16. Metal–Metal Bonding in $\text{Mn}_2(\text{CO})_{10}$; Fragment Deformation Density, 488

Example 8.17. Density Modeling for Fe(II)–Phthalocyanine and Co(II)–Tetraphenyl-porphyrin, 491

Spin Densities from Neutron Scattering, 493

Example 8.18. Spin Distributions in Some Coordination Systems Obtained from Neutron Scattering, 494

Summary Notes, 495

Exercises and Problems, 497

References, 500

9 Stereochemistry and Crystal Chemistry 506**9.1 Definitions. Semiclassical Approaches, 506**

The Notion of Molecular Shape, 506

Directed Valences, Localized Electron Pairs, and Valence
Shell Electron Pair Repulsion (VSEPR), 508

Nonbonding Orbitals and Nodal Properties, 512

Example 9.1. Influence of Nonbonding MOs on
Coordination Geometry, 513

Complementary Spherical Electron Density Model, 514

Example 9.2. The Inert-Gas Rule in Stereochemistry of
Some Coordination Compounds, 517

9.2 Vibronic Effects in Stereochemistry, 519

Nuclear Motion Effects: Relativity to the Means of
Observation and Vibronic Amplification of Distortions, 519

Qualitative Stereochemical Effects of Jahn–Teller and
Pseudo-Jahn–Teller Distortions, 522

Example 9.3. Stereochemistry of MX_n Systems
Controlled by Electronic Structure and Vibronic
Coupling, 524

Example 9.4. Pseudo-JT Origin of Distortions in
 $CuCl_5^{3-}$ versus $ZnCl_5^{3-}$, 525

Off-Center Position of the Central Atom, 528

Geometry of Ligand Coordination, 530

Stereochemically Active and Inert Lone Pairs, 535

Pseudorotations in Coordination Systems, 539

9.3 Mutual Influence of Ligands, 544

The Model: *trans* and *cis* Influences in Stereochemistry, 544

Electronic Factors, 546

Vibronic Theory of Ligand Mutual Influence, 549

9.4 Crystal Stereochemistry, 554

The Plasticity Effect, 554

Distortion Isomers, 559

Example 9.5. Origin of Distortion Isomers in
 $Cu(NH_3)_2X_2$, $X = Cl, Br$, 559

Temperature-Dependent Solid-State Conformers, 562

Cooperative Effects: Order–Disorder and “Displacive”
Phase Transitions and Helicoidal Structures, 566

Summary Notes, 572

Exercises and Problems, 573

References, 575

10 Electron Transfer, Redox Properties, and Electron-Conformational Effects	579
10.1 Electron Transfer and Charge Transfer by Coordination, 579	
Intramolecular Charge Transfer and Intermolecular Electron Transfer, 579	
Redox Capacitance, 584	
<i>Example 10.1.</i> Charge Transfer by Coordination of Peroxide to Iron Porphyrin, 587	
Hard and Soft Acids and Bases, 587	
10.2 Electron Transfer in Mixed-Valence Compounds, 591	
Mixed-Valence Compounds as Electronic Systems; a Two-Level Dimer, 591	
<i>Example 10.2.</i> The Creutz–Taube (CT) Ion as a Mixed-Valence System, 594	
Magnetic Properties, 597	
Mixed-Valence Trimers: Coexistence of Localized and Delocalized States, 601	
<i>Example 10.3.</i> Tricenter Ferredoxin, 606	
10.3 Electron-Conformational Effects in Biological Systems, 609	
Distortions Produced by Excess Electronic Charge; Special Features of Metalloenzymes, 609	
Trigger Mechanism of Hemoglobin Oxygenation: Comparison with Peroxidase, 612	
Summary Notes, 618	
Exercises and Problems, 619	
References, 620	
11 Reactivity and Catalytic Action	623
11.1 Electronic Factors in Reactivity, 623	
Chemical Reactivity and Activated Complexes, 623	
Frontier Orbitals and Perturbation Theory, 627	
Orbital Symmetry Rules in Reaction Mechanisms, 630	
<i>Example 11.1.</i> Orbital Symmetry Rules and Vibronic Coupling in Formation of Cyclobutane from Ethylene with Catalyst Participation, 633	
11.2 Electronic Control of Chemical Activation via Vibronic Coupling, 635	

- Chemical Activation by Electron Rearrangement, 635
 Activation of Small Molecules by Coordination:
 Semiempirical Approach, 640
Example 11.2. Activation of Carbon Monoxide, 642
Example 11.3. Numerical Estimate of CO Activation by
 Coordination to a NiO Surface, 646
Example 11.4. Activation of Dinitrogen, 646
Example 11.5. Activation of Nitrogen Monoxide, 648
Example 11.6. Activation of Hydrogen, 649
Example 11.7. Activation of Oxygen by Hemoproteins, 650
 Jahn–Teller- and Pseudo-Jahn–Teller-Induced Chemical
 Activation, 652
Example 11.8. Jahn–Teller-Induced Substitution
 Reactions in Octahedral Complexes with an *E* Term, 655

11.3 Direct Computation of Energy Barriers of Chemical Reactions, 656

- Substitution Reactions: The *trans* Effect, 656
 Ligand Coupling and Cleavage Processes, 662
 CO Reductive Hydrogenation and Carbonyl Insertion
 Reactions, 666
 Olefin Insertion Reactions, 674
Example 11.9. Polymerization with Ziegler–Natta
 Catalysts, 677
 Photochemical Reactions of Organometallics, 682

Summary Notes, 686

Questions and Problems, 687

References, 689

Appendixes

- Appendix 1. Tables of Characters of Irreducible Representations of Most Usable Symmetry Point Groups and Direct Products of Some Representations, 692
 Appendix 2. General Expressions for the Matrix Element $V_{mm'}$ of Perturbation of the States of One *d* Electron in Crystal Fields of Arbitrary Symmetry, 697
 Appendix 3. Calculation of the Destabilization and Splitting of the States of One *d* Electron in Crystal Fields of Different Symmetries, 700

Appendix 4. Matrix Elements of Crystal Field Perturbation of a Two-Electron Term $F(nd)^2$, V'_{ij} , $i, j = 1, 2, \dots, 7$ Expressed by One-Electron Matrix Elements V'_{mm} Given in Appendix 2, 703

Appendix 5. Matrix Elements of Crystal Field Perturbation of f Electron States, 705
