Excitation of the Heart. - Moscow: Nauka, 2003. - 144 p.

ISBN 5-02002810-X

The problems of general and evolutionary electrocardiology on the succession of depolarization (activation) wave propagation in heart atria and ventricles are considered. This book is based on original data obtained by the authors and presented here in English for the first time. Four types of excitation of intramural layers of ventricular myocardium in vertebrate animals are described. The experimental results showing the succession of atrial and ventricular activation on chronotopographic maps allow one to analyze the electrophysiological regularities of heart functioning in vertebrate animals at different stages of the evolutionary process. The book is intended for physiologists, biophysicists, specialists in the field of cardiology and biologists interested in the problems of evolution of functions. Bibliography 304 references, 77 illustrations, 5 tables.

Contents

Introduction.....	6
Chapter 1. FISH.....	8
1.1. Excitation of sinus venous and atria.....	8
1.2. Ventricular excitation.....	10
1.2.1. Regularities of depolarization of intramural myocardial layers	11
1.2.2. Form and distribution of extracellular potentials on the picardium.....	16
Chapter 2. AMPHIBIANS.....	17
2.1. Atrial excitation.....	17
2.2. Ventricular excitation.....	17
2.2.1. Regularities of depolarization of intramural myocardial layers	17
Chapter 3. REPTILES.....	20
3.1. Excitation of sinus venous and atria.....	20
3.2. Ventricular excitation.....	21
3.2.1. Regularities of depolarization of the intramural myocardial layers.....	21
3.2.2. Form and distribution of extracellular potentials on the epicardium.....	26
Chapter 4. BIRDS.....	29
4.1. Atrial excitation.....	29
4.2. Ventricular excitation.....	31
4.2.1. Regularities of depolarization of intramural myocardial layers	31
4.2.2. Form and distribution of extracellular potentials on the epicardium.....	35
Chapter 5. MAMMALS.....	38
5.1. Predators.....	38
5.1.1. Atrial excitation.....	38
5.1.1.1. Form and distribution of extracellular endocardial potentials.....	38
5.1.1.2. Form and distribution of extracellular potentials on dog epicardium.....	38
5.1.1.3. Succession of depolarization wave spreading along the epicardium.....	40

5.1.1.4. Regularities of depolarization of the intramural myocardial layers.....	42
5.1.1.5. Comparison of the succession of atrial excitation with the P wave.....	46
5.1.2. Ventricular excitation.....	49
5.1.2.1. Form and distribution of extracellular endocardial potentials.....	49
5.1.2.2. Form and distribution of extracellular epicardial potentials.....	50
5.1.2.3. Succession of depolarization wave spreading along the epicardium.....	50
5.1.2.4. Depolarization of intramural myocardial layers.....	51
5.1.2.4.1. Dog.....	53
5.1.2.4.2. Polar fox.....	57
5.1.2.4.3. Regularities of depolarization of intramural myocardial layers.....	58
5.1.3. Cardiac ventricular depolarization in dog under ectopic foci of excitation.....	59
5.1.4. The process of depolarization of intramural myocardial layers under experimental ischemia in dog.....	65
5.2. Pinniped.....	68
5.2.1. Ventricular excitation.....	68
5.2.1.1. Form and distribution of extracellular endocardial potentials.....	69
5.2.1.2. Form and distribution of extracellular potentials on the epicardium.....	69
5.3. Ungulates.....	76
5.3.1. Atrial excitation.....	77
5.3.1.1. Form and distribution of extracellular endocardial potentials in reindeer.....	77
5.3.1.2. Form and distribution of extracellular potentials in epicardium in sheep.....	77
5.3.1.3. Succession of depolarization wave spreading through atrial epicardium.....	79
5.3.1.4. Regularities of depolarization of intramural layers in atrial myocardium in sheep.....	79
5.3.1.5. Comparison of P wave elements in electrocardiogram with the succession of atrial excitation.....	83
5.3.2. Ventricular excitation.....	85
5.3.2.1. Form and distribution of extracellular endocardial potentials in northern reindeer.....	85
5.3.2.2. Form and distribution of extracellular potentials on epicardium.....	87
5.3.2.3. Succession of depolarization wave propagation through epicardium.....	88

5.3.2.4. Regularities of depolarization of intramural myocardial layers.....	88
5.3.2.4.1. Reindeer	89
5.3.2.4.2. Sheep.....	94
Chapter 6. PERSPECTIVES OF THE FUNDAMENTAL AND APPLIED USE OF THE RESULTS OF THE STUDY OF MYOCARDIAL ACTIVATION IN VERTEBRATE ANIMALS	98
6.1. Myocardial activation in vertebrates. New approaches to the study of evolution of the cardiac activity and the blood circulation system	99
6.2. Contractile, pumping heart function and myocardial activation....	102
6.3. Perspective trends in the study of myocardial activation.....	105
6.3.1. Creation of 3D model of myocardial activation.....	105
6.3.2. Models of pathological heart conditions in experiments on animals.....	105
6.3.3. New possibilities of synchronous multi-channel investigations of cardioelectric field.....	106
6.4. Myocardial activation and new possibilities of electrocardiology	107
6.4.1. Epicardial electrography and intramural myocardial activation	107
6.4.2. Identification of QRS complex elements in electrocardiogram with the succession of spatial myocardial activation.....	107
Literature.....	121
