В сборнике представлены материалы по основным направлениям VII Международной конференции «Загрязнение окружающей среды, адаптация, иммунитет», отражающие усилия российских и зарубежных ученых в решении глобальных экологических проблем, разработке новых методов индикации окружающей среды и её ремедиации.

Значительная часть материалов посвящена реакциям биологических систем на изменение условий внешней среды. Особое внимание уделено биологии защиты при стрессовых ситуациях, регуляции нейроэндокринных и иммунных взаимодействий, иммунореабилитации населения, проживающего в неблагоприятных экологических условиях.

Материалы представляют интерес для специалистов, работающих в различных областях охраны окружающей среды, здравоохранения, микробиологии, иммунологии и биотехнологии.

ABSTRACTS

28 September – 05 October 2008
PERM-N.NOVGOROD-PERM, RUSSIA

Environmental Pollution, Adaptation, Immunity. Abstracts of the VII International Conference // Institute of Ecology and Genetics of Microorganisms UB RAS, Perm, 2008, 173 p.

ISBN 5-7691-1981-0

Presented is the information related to the principal issues of the VII International Conference “Environmental pollution, adaptation and immunity” that highlights the efforts of national and foreign scientists to solve global ecological problems, as well as elaborate new methods for indication of the environment and its remediation.

Much of material considers the reactions of biological systems to the environmental changes. Special focus is given to biology of protection under stressful conditions; regulation of neuroendocrine and immune interactions, and immunorehabilitation of population residing in ecologically unfriendly conditions.

These materials present a value for specialists from various fields such as environmental protection, health care, microbiology, immunology, and biotechnology.
